SUMMARY

Full-stack developer and Computer Science student who builds and runs production systems for Kenyan users. Founder of SolveTech Africa, whose live product KopaAlert sends automated SMS debt reminders for shops. Strong in Next.js, React and TypeScript; PostgreSQL/Supabase with row-level security; Django and PostGIS; and offline-first apps for low-end phones.

EXPERIENCE & PROJECTS

Founder & Full-Stack Developer · SolveTech Africa: KopaAlert Jul 2026 to present

Live SaaS at kopaalert.shop · Next.js 16, React 19, TypeScript, Supabase (PostgreSQL), Africa's Talking, Vercel

- Built and launched a multi-tenant product that tracks customer credit and sends automated SMS reminders before, on and after due dates; first businesses onboarded.
- Enforced business, branch and staff-level access in PostgreSQL (row-level security and triggers), including deactivated staff and branch opening hours, so the rules hold even if the app is bypassed.
- Shipped subscription billing, per-segment SMS charging, referrals, multi-branch support, an audit log, PDF statements and Excel import (290+ commits).
- Rehearsed every production migration on a copy of the live schema; Jest tests for billing and access-control routes.

LindaMeru · Offline crime mapping & dispatch for Meru County (final-year project) Sep 2026 to present

Django + DRF, PostgreSQL + PostGIS (GeoDjango), vanilla JS PWA, Leaflet, IndexedDB, Docker

- Designed an offline-first app for officers on low-end phones: reports are queued on the device and sync exactly once when the network returns.
- Built an ERP (stations, vehicles, rosters, fuel, drones) and dispatch advice that ranks vehicles by road travel time (OpenStreetMap + PostGIS).
- Implemented crime hot-spot analysis (Getis-Ord Gi*), a commander dashboard and a tamper-evident audit trail; 210 automated tests against a real PostGIS database.

SomaOrbit · Multi-tenant school management platform for CBC schools Jul 2026 to present

Next.js 16, React 19, TypeScript, Tailwind CSS, Supabase · V1 complete, in system QA

- Built 57 modules across 165 pages for six roles, covering CBC assessments and report cards, fees with a payment webhook, offline attendance, and SMS/email to guardians.
- Isolated each school's data with row-level security across 99 migrations; added MFA on 12 sensitive areas, two-person approval for refunds and fee waivers, and audit trails.

Freelance Developer · Client projects Jun 2026 to Sep 2026

- Library management system for a Catholic seminary (in use): catalogue with bulk import and shelf labels, loans, reservations, fines, automatic overdue email notices and a student portal. Next.js, Supabase.
- Website with online orders and an admin panel for a cereals and animal-feeds wholesaler in Meru County. React, Supabase.

EDUCATION

BSc Computer Science · Mama Ngina University College Sep 2023 to Dec 2027 (expected)

SKILLS

Languages	TypeScript, JavaScript, Python, SQL (PL/pgSQL)
Frontend	Next.js, React, Tailwind CSS, Progressive Web Apps (service workers, IndexedDB), Leaflet
Backend & data	PostgreSQL, Supabase (RLS), Django REST Framework, PostGIS / GeoDjango
Integrations	Africa's Talking SMS, Resend, payment webhooks, OpenStreetMap, Turnstile
Tools	Git, GitHub, Docker, Linux, Vercel, Jest, Playwright
Spoken	English, Kiswahili, Kimeru
